Persistent agreement on the observed grid
Selected intervals: detected load; Hailo variable YOLO uses its recorded interval

	1 %	2 %	5 %
Hailo / GEMM	not met	not met	50 s
Hailo / Random-pattern YOLO	not met	5 s	5 s
Hailo / YOLO	endpoint only	50 s	10 s
Jetson / GEMM FP16	200 s	100 s	50 s
Jetson / GEMM FP32	50 s	20 s	5 s •
Jetson / GEMM INT8	not met	200 s	50 s
Jetson / Random-pattern YOLO	endpoint only	100 s	5 s •
Jetson / YOLO FP16	200 s	50 s	5 s
Jetson / YOLO FP32	100 s	20 s	5 s •
Jetson / YOLO INT8	endpoint only	endpoint only	5 s •

First tested setting meeting the empirical q95 criterion at this and every higher tested setting.
Fixed within-series comparator: 600 s; at least two settings and n ≥ 2. Dot: retained note.
Descriptive agreement on the observed grid; not calibrated accuracy or a sampling-rate bound.
